

Digitex Rear Finger Guard

Digitex Rear is a rigid / flexible PVC extruded safety strip which prevents fingers being jammed on the hinge side of a door. When fitted the gap is covered completely and it is suitable for domestic or commercial use.

Digitex rear is suitable for doors opening up to 180°. If your premises fall within Health, Safety and Welfare regulations or you just want to protect the little fingers that may be at risk within your premises then Digitex rear is probably the most durable and cost-effective solution. Where possible we would always recommend this product is used in conjunction with a finger protection device fitted to the open hinge side of the door.

Digitex rear is manufactured from PVC Nitrile, Aluminium retaining strips and PVC Cover Strips and after easy fitting requires no maintenance other than a wipe down with a damp cloth for cleaning.

Product Features

- Easy to install, no specialist tools or equipment
