

Digitex Superior Front Finger Gasket

Digitex is a flexible safety strip which prevents fingers being jammed on the open hinge side of a door. When fitted the gap is covered completely and it is suitable for domestic or commercial use.

Digitex is suitable for doors opening up to 180°. If your premises fall within Health, Safety and Welfare regulations or you just want to protect the little fingers that may be at risk within your premises then Digitex is probably the most durable and cost-effective solution on the market today. Where possible we would always recommend this product is used in conjunction with a finger protection device fitted to the hinge side of the door.

Digitex is manufactured from PVC Nitrile, Aluminium retaining strips and PVC Cover Strips and after easy fitting requires no maintenance other than a wipe down with a damp cloth for cleaning.
